

Custom Manufacturing

At **Mountain**, we can manufacture a wide range of attractive, special application shelters, custom built street furniture, structural steel projects or staircases enclosed with glass panels.

Our state of the art manufacturing facility has pulse aluminum and steel welding equipment, a computerized numerically controlled (C.N.C) high speed machining center that can handle parts up to twenty four feet long, a C.N.C. compound double miter saw that is capable of cutting extrusions up to twenty feet long, a fourteen foot C.N.C break-press, C.N.C tube rolling equipment and a shear that can handle panels up to fourteen feet long as well.

Our engineering and design department is equipped with the latest in cad, rendering and stress analysis software. Using your photograph as a background, we can show you exactly what your project is going to look like before it is even started. Need a custom aluminum extrusion for your project? We can design it for you! Our design team is waiting to review your drawings or project requirements.

Of course, the same quality and service are built in to custom projects that our customers enjoy with our more standard offerings. Contact us today for a quote on your project. We are confident that we can provide a practical and cost effective solution to your problem.
